

Wallet Education Module

In order to have the confidence to really do things on the Theta Blockchain, a person needs to understand the environment in which their engagement is contained. This wallet module video series explains how things happen behind the scenes as the student is requested to perform basic wallet functionality. After completion, the student should be able to figure things out in a wallet in a fearless way.

The minting of this NFT unlocks the video series using the Theta EdgeCloud Video DRM technology. The NFT is soul bound for it unlocks content that is considered consumed once the owner has completed the series.

Once the user has completed the course, the project offers the ability to signal that the course has been consumed and understood by the owner.

Minting

This Digital Access Token (DAT) can be minted using ETH, BNB, POL or Tfuel.

The DAT uses the Selene Network Penny Oracle so it can be offered at about \$15 worth of coin.

Note that because this education module expects the user to be able to perform blockchain operations, approximately \$5 worth of Tfuel will be deposited in the minting account so it can be played with.

On the Selene Network mint page, the visitor will be able to mint by simply pressing the appropriate coin logo.

Commissions

For Agents of the Selene Network, this DAT is setup to pay out 40% commissions: 33% to registered sales agents, 7% to websites that provide access to and support the Selene Network.

Also note that about 33% of the purchase price is returned to the buyer so they can perform blockchain operations.

Disclaimers

The project owner reserves the right to modify the content offered and disable minting at any time. The project will strive to deposit 33% of the purchase price in the purchaser's account, but in order to prevent losses during minting, that deposit is not guaranteed to actually be the full 33%.
